

Objective:

Collaborate as a team of three players to interpret and respond to the stimuli correctly. Your team needs to achieve at least **80% accuracy** to unlock the next room.

Player 1:

1. You are not allowed to talk once the game starts
2. You will see a word, either "**blue**" or "**red**," displayed in a colored font (blue or red).
3. **Ignore the font color** and respond to the word's content:
 - If the word is "**blue**", perform an **upward hand gesture**.
 - If the word is "**red**", perform a **downward hand gesture**.

Player 2:

1. You are not allowed to move once the game starts
2. You will see a single-digit number (1–4) displayed in black font at the top of your screen.
3. Below, there will be **two rows of 10 digits each** (total: 20 digits), shown in red, blue, and black fonts.
4. Count **how many times the target digit** (the single-digit number) appears in black font across both rows.
 - For example, if the target digit is **1** and the rows are:
[1234123412]
[1234123412]
Count the number of black **1s**.

Player 3:

1. You are not allowed to see the screen once the game starts
2. Observe the gesture made by **Player 1**:
 - **Upward gesture**: Select the **top row**.
 - **Downward gesture**: Select the **bottom row**.
3. Use the count provided by **Player 2** and press the button corresponding to that number in the indicated row.
